Experiment - 1 :-

Aim: To design an Entity-Relationship (ER) diagram an Indian E-commerce Platform and identify entities, Attributes, relationship and cardinality.

Objective -> To identify entities involved in a e-commerce System. To identify attributes & Primary keys of each entities.
To establish relationship b/w entities.

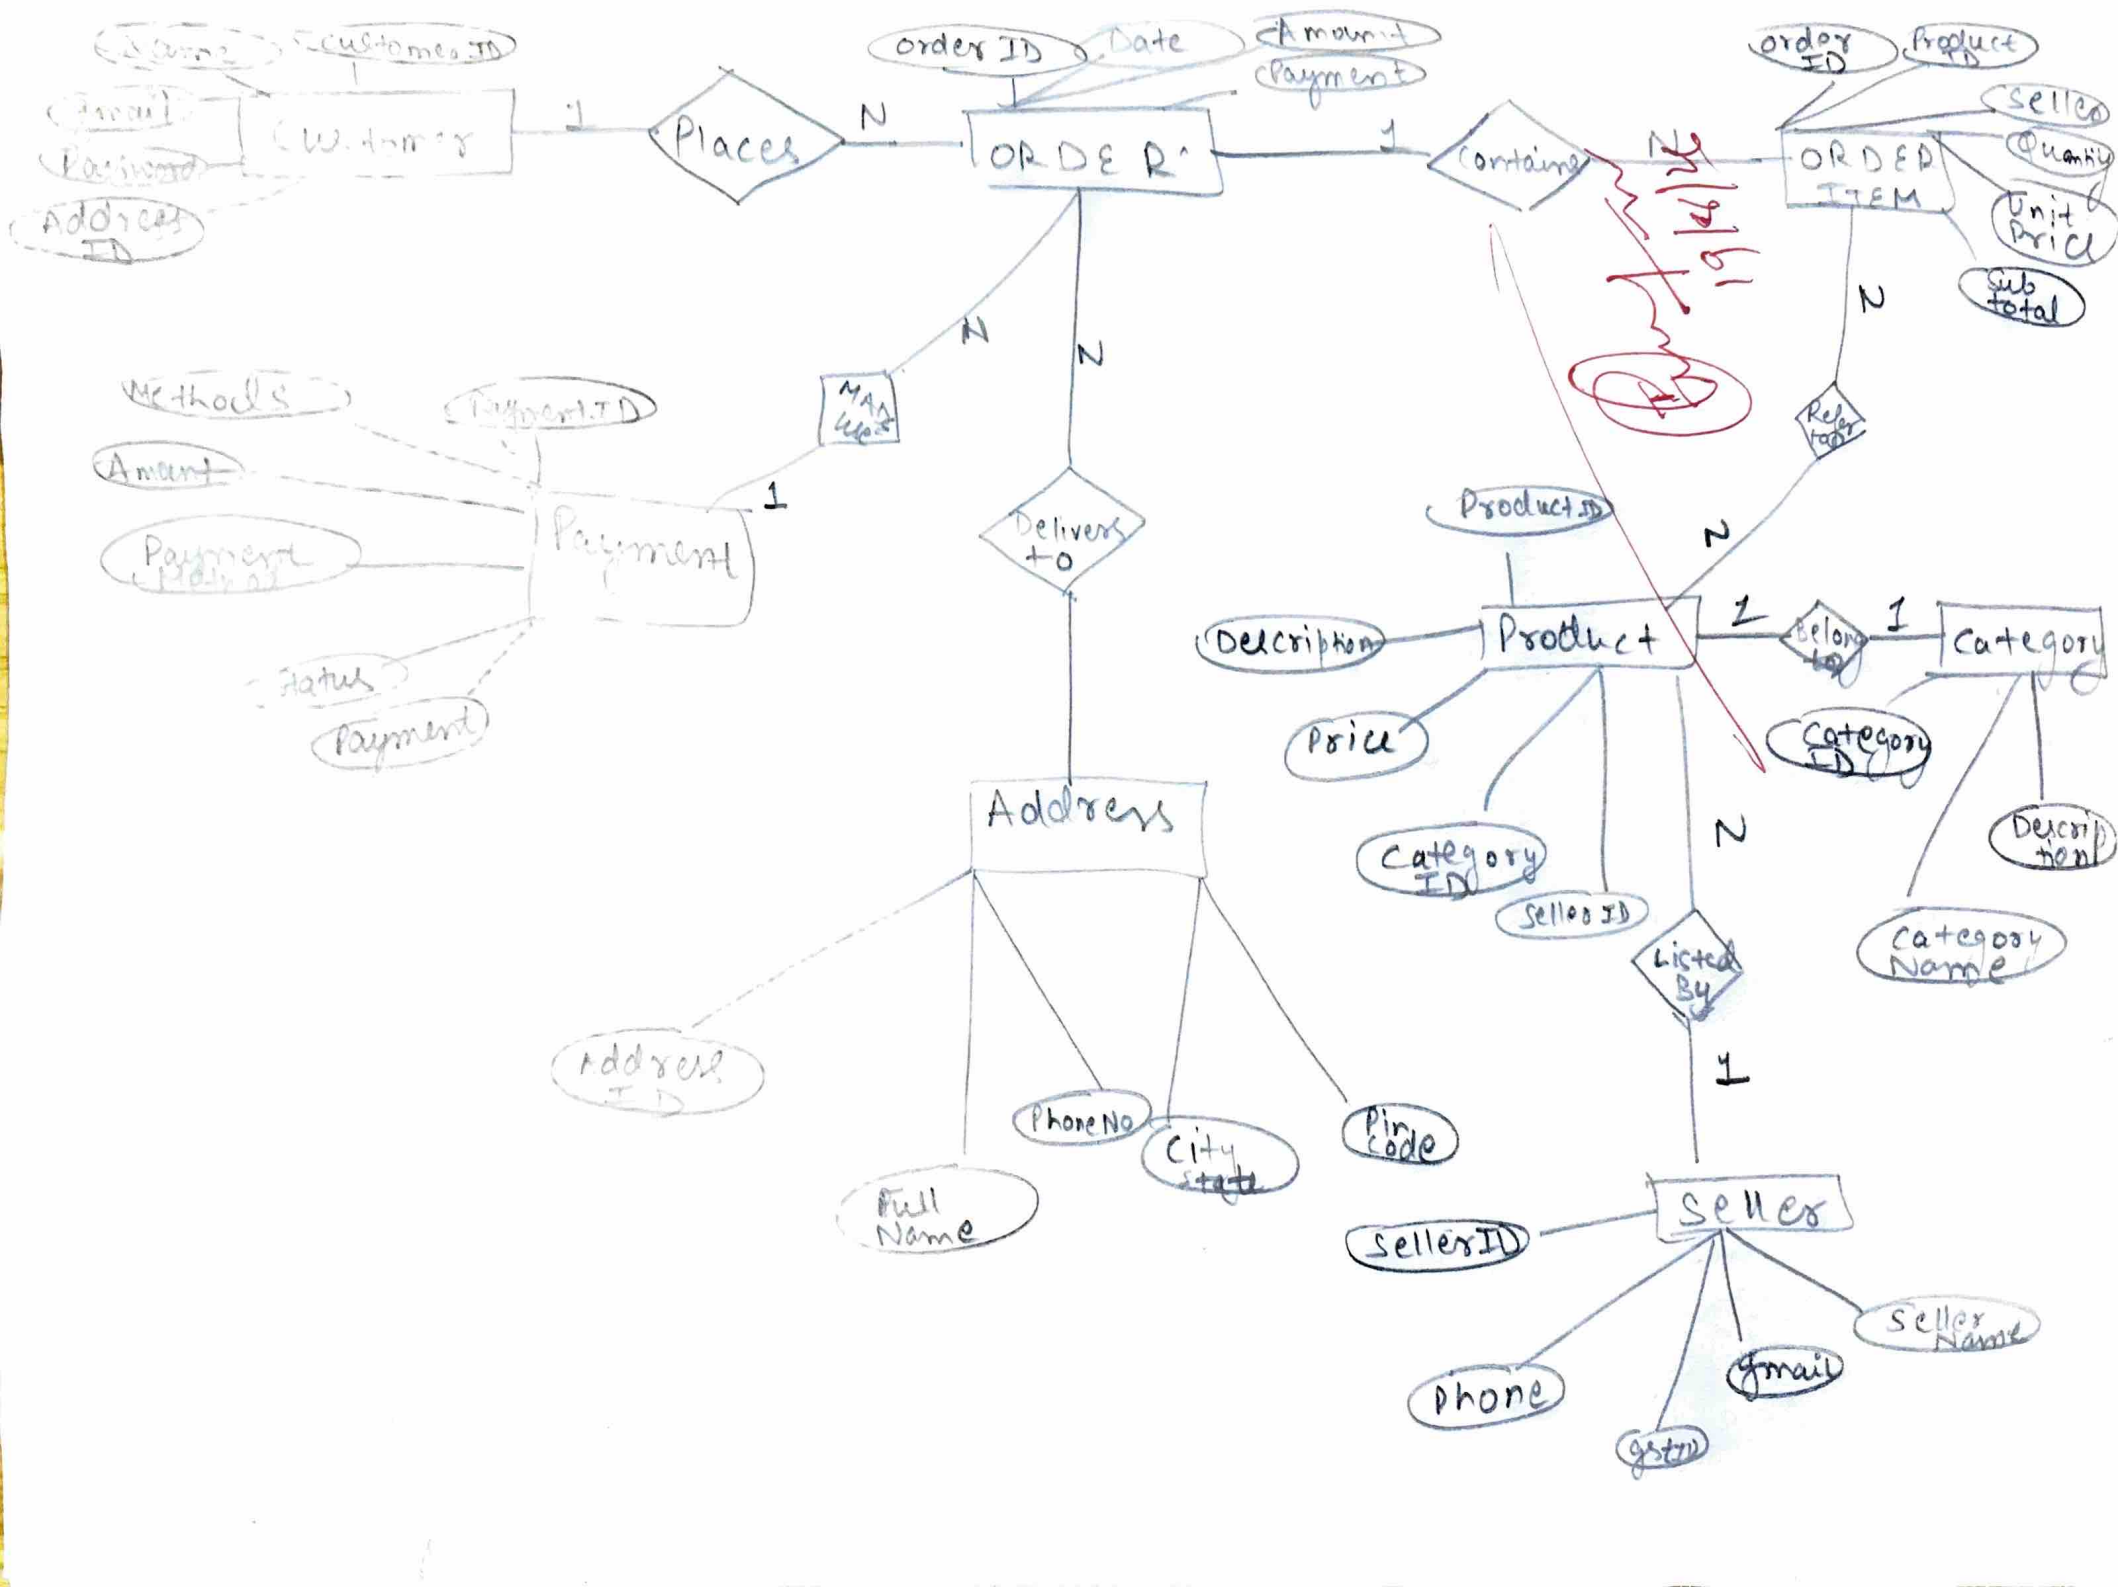

Entities

Customer
Seller
Category
Order
Order_Item
ADDRESS

Cardinality

Customer - Order = 1:N
Order -> Order-item = 1:N
Category -> Product = 1:N
SELLER -> Product = 1:N
Customer - Address = 1:N
Payment -> Order = 1:1
Address = order = 1:N

Result -> ER Diagram for the Indian E-Platform was successfully designed by identifying the required entities, attributes, relationships & cardinalities.
